

About us

IZ Energy has been making homes energy efficient for over 10 years through measures such as insulation, ventilation, and renewable energy. We work with local authorities, social and private landlords, and owner occupiers to help reduce their energy bills. Our specialist advisors can help you identify suitable funding to minimise the cost of installations.

Typical heat loss from your home

upto 25%
through the
doors & windows

upto 25%
through
the loft

upto 15%
through
the floor

upto 35%
through
walls

Why go energy efficient?

- Lower bills
- Reduced energy consumption
- Lower environmental impact
- Greater comfort
- Better health
- Higher energy efficiency

Explore our Tailor-Made Energy Efficiency Solutions

Insulation

Insulation acts as a barrier between your home and the outside to prevent heat from escaping in colder months and entering in warmer seasons.

Solar PV & Batteries

Make the change to renewable energy through Solar PV and harness sustainable electricity generation to power your home.

Air Source Heat Pump

Air source heat pumps are great for regulating the temperature of your home and can be up to 4 times more efficient than other methods of heating and cooling your home.

Ventilation

Install new humidity-controlled extractors, trickle vents on your windows, or even a whole house system to ensure there is good air circulation.

Doors & Windows

If you have single glazed or very draughty windows, replacing them will make a big difference.

Heating Controls

Heating controls help you manage when and how your heating works by enabling you to select the temperature, timings, and zones for temperature control and can be done remotely.

Storage Heater

Modern electric storage heaters are far more efficient, and you can control the heat to your needs.

Gas Boiler

Cut your bills further by upgrading to a new gas boiler that is over 92% efficient and computer controlled for maximum efficiency.
